

Goodale Park West Boylston, MA

Winner of the award for Distinguished Outdoor Tennis Facility by The American Sports Builders Association

Goodale park is a major renovation to existing basketball and tennis courts that had fallen into disrepair due to erosion. A design team, including **CSI Engineering** helped to upgrade this area into a stable and beautiful facility.

CSI Engineering provided a study of existing power and lighting at the failing tennis courts. A report was written with recommendations for new power and lighting based upon a new park layout. CSI also provided budgetary pricing estimates for the Town of West Boylston to seek funding for construction.

With our design, Goodale Park now has significant lighting to illuminate play without being distracting and minimizing glare.
